

## Open Letter to the Media

February 25, 2004

To Whom It May Concern:

As medical and psychological researchers with many years of experience studying addictions and prenatal exposure to psychoactive substances, we are writing to request that the terms “crack baby” and “crack addicted baby” be dropped from usage. These terms and similarly stigmatizing terms, such as “ice babies” and “meth babies,” lack scientific validity and should not be used.

Despite the lack of a medical or scientific basis for the use of these pejorative and stigmatizing labels, they have been repeatedly used in the popular media, in a wide variety of contexts and across the country. Just a few examples include the Washington Post (“She taught a class of about eight kids, ages 3 to 6, in Charlottesville when her husband, Rob, was attending business school at the University of Virginia. Some of the children just had speech delays; others were *crack babies*.”) Ylan Q. Mui, Including Ashley, Washington Post Magazine (Nov. 9, 2003, at W22); LA Weekly (California) (“Some widows take up tennis, or volunteer to be museum docents or to hold *crack babies* down at County hospital”) Michelle Huneven, Atwater Rising (Sept. 12, 2003 pg. 38); The Arizona Republic (“But the number of removals was rising in the four months before that, up 13 percent after the 2001 death of a *crack baby* was made public last summer.”) Karina Bland, CPS Taking More Children; New Effort May Stir Trouble Experts Say (July 5, 2003 pg. 1A); The Post and Courier (Charleston, SC) (“The defendants had asked the Supreme Court to again consider the issue of whether the women knew their urine was being screened for drugs, as part of a 1989 policy designed to stop the *crack baby* epidemic.”) Herb Frazier, Supreme Court Won't Review MUSC Case; Trial Will Determine Damage Awards for 10 Pregnant Women on Cocaine, (June 17, 2003, pg. 3B); Amarillo Globe-News, Jim McBride, Women Indicted in ‘*Crack Baby*’ Case (Feb. 6, 2004, pg. 1A) (*italics added throughout*).

Throughout almost 20 years of research, none of us has identified a recognizable condition, syndrome or disorder that should be termed “crack baby.” Some of our published research finds subtle effects of prenatal cocaine exposure in selected developmental domains, while other of our research publications do not. This is in contrast to Fetal Alcohol Syndrome, which has a narrow and specific set of criteria for diagnosis.

The term “crack addicted baby” is no less defensible. Addiction is a technical term that refers to compulsive behavior that continues in spite of adverse consequences. By definition, babies cannot be “addicted” to crack or anything else. *In utero* physiologic dependence on opiates (not addiction), known as Neonatal Narcotic Abstinence Syndrome, is readily diagnosed, but no such symptoms have been found to occur following prenatal cocaine exposure.

That these concerns are not merely academic is vividly illustrated by the fact that the media’s use of these terms has led to a situation in which children can be starved and abused and the “crack baby” label can be used to excuse the results. The *New York Times*’ coverage of the New Jersey family that allegedly starved four of their adopted sons provides a compelling and tragic example

of how the stereotype of the “crack baby” is not only scientifically inaccurate, but potentially dangerous to the children to whom it is applied. On October 28, 2003, Lydia Polgreen, in “Uneven Care Not Unusual in Families, Experts Say,” reported that the family used this label as an explanation for the children’s apparent lack of growth: “In the Jacksons’ case, the couple told friends, neighbors and people who went to their church that the four brothers had been born addicted to crack cocaine and had an eating disorder.” Several days later, in another story on the same children, “Amid Images of Love and Starvation, a More Nuanced Picture Emerges” (November 2, 2003), Leslie Kaufman and Richard Lezin Jones reported that “if anyone asked about the little ones, they were told that the children had some fetal alcohol and crack baby syndromes, and that’s why they would never grow.”

While these references are indirect quotes from sources, another *New York Times* story that used this term and the many uses of the term by other media outlets validated this usage. In “In Home That Looked Loving, 4 Boys’ Suffering Was Unseen” (October 28, 2003), the *New York Times* reported that “Michael, the youngest, was *born a crack baby* before being taken in” (italics added).

We are deeply disappointed that American and international media continues to use a term that not only lacks any scientific basis but endangers and disenfranchises the children to whom it is applied.

We would be happy to furnish an extensive bibliography if requested or to send representatives to meet with the staff or editorial boards of your paper, journal, or station and to give you more detailed technical information. Please feel free to contact David C. Lewis, M.D., 401-444-1818, David\_Lewis@brown.edu, Professor of Medicine and Community Health, Brown University, who has agreed to coordinate such requests on our behalf and who can provide you with contact information for the researchers listed below in alphabetical order.

Sincerely,

Robert E. Arendt, PhD  
Research Director  
The Buckeye Ranch

Emmalee S. Bandstra, M.D.  
Professor of Pediatrics and Obstetrics and Gynecology  
Director, Perinatal Chemical Addiction Research and Education (CARE) Program  
Departments of Pediatrics, Division of Neonatology  
University of Miami School of Medicine

Marjorie Beeghly, Ph.D  
Assistant Professor of Pediatrics, Harvard Medical School  
Senior Research Associate, Children’s Hospital, Boston  
Child Development Unit  
Children’s Hospital

Marylou Behnke, M.D.  
Professor, Department of Pediatrics  
Co-Director, Developmental Evaluation and Intervention Program  
University of Florida, College of Medicine

Maureen Black, Ph.D  
Professor, Department of Pediatrics, University of Maryland School of Medicine

Elizabeth R. Brown, M.D.  
Director of Neonatology  
Boston University School of Medicine/Boston Medical Center

Ira J. Chasnoff, M.D.  
Children's Research Triangle

Wendy Chavkin, M.D., MPH  
Professor of Clinical Public Health and Obstetrics and Gynecology  
Mailman School of Public Health and College of Physicians and Surgeons  
Columbia University

Claire D. Coles, Ph.D  
Director, Fetal Alcohol and Drug Exposure Center, Marcus Institute  
Professor, Department of Psychiatry and Behavioral Sciences  
Emory University School of Medicine

Nancy Day, Ph.D  
Professor of Psychiatry and Epidemiology  
Western Psychiatric Institute and Clinic

Virginia Delaney-Black, M.D., MPH  
Professor of Pediatrics  
Wayne State University  
Assistant Director, Children's Research Center of Michigan  
Children's Hospital of Michigan

Chris Derauf, M.D.  
Assistant Professor of Pediatrics  
University of Hawaii John A. Burns School of Medicine

Fonda Davis Eyler, Ph.D  
Professor, Department of Pediatrics  
Co-Director, Developmental Evaluation and Intervention Program  
University of Florida, College of Medicine

Deborah A. Frank, M.D.  
Professor of Pediatrics

Boston University School of Medicine  
Boston Medicine Center

Peter Fried, Ph.D  
Department of Psychology  
Carleton University

Judith M. Gardner, Ph.D  
Bernard Z. Karmel, Ph.D.  
NYS Institute for Basic Research in Developmental Disabilities

Hallam Hurt, M.D.  
Associate Professor of Pediatrics  
Neonatology, Department of Pediatrics  
University of Pennsylvania School of Medicine  
Children's Hospital of Philadelphia

Joseph L. Jacobson, Ph.D  
Professor and Chair, Department of Psychology  
Wayne State University

Sandra W. Jacobson, Ph.D  
Professor, Department of Psychiatry and Behavioral Neurosciences  
Wayne State University School of Medicine

Stephen R. Kandall, MD  
Professor of Pediatrics, Emeritus

John R. Knight, M.D.  
Assistant Professor of Pediatrics, Harvard Medical School  
Director, Center for Adolescent Substance Abuse Research  
Children's Hospital, Boston

Gideon Koren M.D., FRCPC  
Professor of Pediatrics, Pharmacology, Pharmacy, Medicine, and Medical Genetics  
University of Toronto  
Director, Motherisk Program  
Senior Scientist  
The Hospital for Sick Children  
Clinical Pharmacology Department

Barry Lester, Ph.D  
Professor of Psychiatry and Pediatrics  
Brown Medical School  
Director, Infant Development Center

Linda Mayes, M.D.  
Arnold Gesell Professor of Child Psychiatry, Pediatrics, and Psychology  
Yale Child Study Center

Connie E. Morrow, Ph.D  
Research Associate  
Professor of Pediatrics and Psychology  
Associate Director, Perinatal Chemical Addiction Research and Education (CARE) Program  
University of Miami School of Medicine

Prasanna Nair, M.D., MPH  
Professor, Department of Pediatrics  
University of Maryland School of Medicine

Daniel R. Neuspiel, M.D., MPH  
Associate Professor of Pediatrics and of Population Health  
Albert Einstein College of Medicine  
Associate Chairman of Pediatrics, Beth Israel Medical Center

Gale A. Richardson, Ph.D  
Associate Professor of Psychiatry and Epidemiology  
University of Pittsburgh School of Medicine  
Western Psychiatric Institute and Clinic

Lynn T. Singer, Ph.D  
Interim Provost and University Vice-President  
Case Western University

Barry Zuckerman, M.D.  
Professor and Chairman  
Department of Pediatrics  
Boston University School of Medicine  
Boston Medical Center
